Kamitori S., Abe A., Ohtaki A., Kaji A., Tonozuka T., Sakano Y.;
"Crystal structures and structural comparison of Thermoactinomyces
"ulgaris R-47 alpha-amylase 1 (TVAI) at 1.6 A resolution and
alpha-amylase 2 (TVAII) at 2.3 A resolution.";

J. Mol. Biol. 318:443-453(2002).
-!- FUNCTION: Hydrolyzes pullulan efficiently but only a small amount
of starch. Endobydrolysis of 1.4-alpha-glucosidic linkages in
pullulan to form panose. Cleaves also (1-6)-alpha-glucosidic
linkages to form maltotriose.
-!- CATALITIC ACTIVITY: Hydrolysis of pullulan to panose (6-alpha-D-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -!- FUNCTION: Could be responsible for synthesis of pseudouridine from
uracil-13 in transfer RNAs (By similarity).
-!- CATALYTIC ACTIVITY: Uracil + D-ribose 5-phosphate = pseudouridine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5'-phosphate + H(2)O.
-!- SIMILARITY: Belongs to the pseudouridine synthase truD family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=VC-16 / DSM 4304 / ATCC 49558;

Fungal Genet. Biol. 20:153-167(1996).
-!- FUNCTION: Plays a major role in cell wall biogenesis.
-!- CATALYTIC ACTIVITY: UDP-N-acetyl-D-glucosamine + {(1,4)-(N-acetyl-beta-D-glucosaminyl)}(N) = UDP + {(1,4)-(N-acetyl-beta-D-glucosaminyl)}(N+1).

SUBCELLULAR LOCATION: Plasma membrane-bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Emericella nidulans (Aspergillus nidulans).

                                                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Outer membrane.

RISCELLANEOUS: THIS PROTEIN IS SUBJECT TO PHASE-VARIABLE EXPRESSION ASSOCIATED WITH ALTERATION IN THE LENGTH OF THE CCAR REPEAT REGION. THIS MECHANISM IS CALLED SLIPPED-STRAND MISPAIRING. ADDITION OR LOSS OF CCAA REPEAT UNITS WOULD CHANGE THE READING FRAME AND RESULT IN INTRODUCTION OF STOP CODONS DOWNSTREAM OF THE FRAME AND RESULT INSTRODUCTION OF STOP CODONS DOWNSTREAM OF THE REPEAT REGION. THIS MAY BE A MECHANISM OF REGULATION AND A REPEAT REGION. THE INMINIOLOGICAL RESPONSE OF THE HOST.

SIMILARITY: BELONGS TO THE TONB-DEPENDENT RECEPTOR PROTEIN FAMILY; HEMOGLOBIN/HAPTOGLOBIN BINDING PROTEIN SUBFAMILY.

May bind a 4Fe-4S cluster.

SUBUNIT: FORMATE DEHYDROGENASE IS A MEMBRANE-BOUND COMPLEX, FORMED BY SUBUNITS ALPHA, BETA AND GAMMA.

SUBCELLULAR LOCATION: Cytoplasmic (Potential).

SUBCELLULAR LOCATION OF BOTH E.COLI FDNG AND FDOG.

SIMILARITY: Belongs to the prokaryotic molybdopterin-containing
SEQUENCE
